These guidance notes are designed to help you make your application and lead you through the process so please read thoroughly.

Eligibility and application process

AHRC funds outstanding original research across the whole range of the arts and humanities. Its doctoral award funding is open to UK and International research students as detailed on the UKRI website.

As an arts and humanities doctoral training partnership, we welcome applications for interdisciplinary and practice research. We encourage applications from people from all backgrounds and identities, to avoid perpetuating biases in arts and humanities research.

There are four potential forms of eligible preparation that M4C recognise:

1. You might hold a Masters qualification at the time of application

2. You might be working towards a Masters qualification that you will have completed by the time your PhD begins (even though the result may not be known and the final examination board may not yet have taken place)

3. You might have professional and/or creative experience that is pertinent to your proposed research

4. You might have already commenced doctoral study. Students are eligible to apply for AHRC funding, provided that, at the start of the AHRC award, they will have at least 50% of their period of study remaining. (For October 2022 entry, this means that you cannot have started your studies before 30 December 2020 (full-time) or before 1 April 2019 (part-time).

Awards for UK residents cover UK tuition fees and provide a stipend at the UK Research and Innovation (UKRI) rate.

International applicants will be eligible for tuition fees at the UK rate and a stipend to support living costs. UKRI (AHRC) funding will not cover international fees set by universities. Funding for this may be available from other sources but specific guidance on this is currently not available. Please watch out for updated information on the UKRI and Midlands4Cities websites.

UKCISA provides information on tuition fees to help you assess your fee status. If you click on that link, you should find a guide to give you a clear idea of whether you have UK or International student status.

Additional eligibility points

1. If you are already in receipt of a doctoral level qualification you are ineligible to
apply for funding from the Midlands4Cities Doctoral Training Partnership.

2. If you are currently a member of academic staff at one of the M4C partner universities, and intend to remain in employment, then you are ineligible to apply for funding from the Midlands4Cities Doctoral Training Partnership. Academic staff who are employed in M4C partner universities either full- or part-time in permanent or long-term fixed appointments are eligible to undertake PhDs as identified through the staff development procedures at their own institution. Staff at other universities are eligible to apply for a part-time studentship. However, the award would still be subject to the standard terms and conditions attached to a part-time studentship, for instance, with regard to hours worked, and the proposed PhD must be distinct from the work that the person is contracted to do at the institution. If these circumstances apply to you, please contact the M4C Site Directors of your university before beginning your application.

3. You are only able to make an application for funding to M4C on two separate occasions. Applications submitted for a third time (i.e. in three successive years) will be ineligible and will not be considered.

4. Employment: If you are currently employed full-time and intend to remain employed full-time whilst undertaking your PhD studies, you will be ineligible to apply for funding. You must make your employment position clear on the application form. Employment for part-time students should not exceed more than 20 hours in any week, and for full-time students should not exceed more than 6 hours in any week; international students must also check the limits on paid employment detailed in their visas.

5. If an M4C student takes up a salaried full-time position, Midlands4Cities and the AHRC will not continue funding (even for part-time study). If employment is for a fixed short-term appointment, it may be possible to take a leave of absence from AHRC-funded M4C PhD study and suspend the studentship for the relevant period.

6. As an M4C DTP student you will be expected to live within reasonable travel time of your designated home university. This is to ensure that you are not isolated and get the full support, mentoring, training and access to the facilities you will need to complete your research successfully and to a high standard. The only exceptions to this are periods of absence that are an essential part of your study e.g. fieldwork, study visits or conference attendance.

7. You are only allowed to submit ONE application to either of the Midlands4Cities doctoral route competitions. Students who apply for a Collaborative Doctoral Award are also eligible to apply to the Open Doctoral Award competition.
The application process

Please ensure that you allow yourself enough time to complete your online funding application form and have secured the submission of your references by the deadline 12 January 2022 (noon UK time) for entry in October 2022. To aid with time zone conversion of the deadline, please see the below link:

World clock converter

Awards cannot be deferred other than in exceptional circumstances.

Once you have chosen to apply for either the Open Doctoral Award or an advertised Collaborative Doctoral Award there are three stages to the application process.

**Step one: Identify a supervisor(s) and home university**

For **Collaborative Doctoral Awards (CDAs)**, read the project description and contact the lead academic supervisor to find out more information. You will also want to discuss with the lead supervisor how you would approach the project. The university at which the lead supervisor is based will become your Home University.

For **Open Doctoral Awards**, you’ll need to identify a Home Institution and one or more supervisors (maximum three). You can have supervisors from one or more of the M4C partner universities. To identify a suitable lead supervisor and Home Institution, you can use the university websites. These will help you identify departments, schools, centres and/or institutes in your research area(s). Staff profiles on websites will often feature a potential supervisor’s current research interests, their previous and upcoming publications and activities, and a list of their previously supervised doctoral researchers and projects. This information can help you assess their suitability to support your research.

Once you have identified a potential supervisor, you should write them a brief email introducing yourself and enquire about discussing the ideas and focus of your prospective PhD research. During your discussions with the prospective supervisor(s), you should ask them specific questions about your project. Your potential supervisor(s) can help you refine your project for your M4C application and may be able to provide examples of sample M4C applications where they have permission to do so.

When considering a prospective Home Institution, it’s important to think about the other academics in your university department, the PhD students that are already based there, available facilities and the research networks the department is host to or part of. This information can usually be found on a university department’s website and will help you assess how a department will fit with your developing research interests. It may also be possible to reach out to current and past PhD students in the department, to ask about the
research culture and perhaps get an idea of what it is like working with your proposed supervisor(s).

It is important to make early contact with potential supervisors. You will want to have begun contacting potential supervisors by late autumn, get your university application in before the New Year, and then apply to M4C by the January deadline.

**Step two: Apply for a place to study at an M4C University**

You will need to have applied for a place to study at one of the eight M4C universities before you can apply for funding. It is not necessary for you to have received a formal offer in order to apply for funding, but your application to study at a M4C university must be in process with an ID number which will be required for final submission of your funding application.

As such, apply to a university first *for a place* and then apply for *funding*.

To support both your application for a place to study and your funding application to Midlands4Cities, it is essential that two references are submitted via the online M4C reference form by **12 January 2022 (noon UK time)**. Please ensure that you read the Reference Request section of this guidance carefully, and make sure your referees know that their reference may be used for your application to the university as well as to Midlands4Cities.

Whilst most of the universities will use M4C references to support your application to the university, you must follow the application processes laid down by your home institution. Please consult your Site Directors, using the institutional email address on this page: www.midlands4cities.ac.uk/contact to ensure you comply with those processes.

**Step three: Apply for M4C funding**

Once your M4C University application form is in process (and you have received an applicant ID), you will be able to begin your M4C funding application. Applications for both doctoral routes, Open Doctoral Awards and Collaborative Doctoral Awards, should be completed on the M4C online application form.

M4C also offer online and city-based Application Writing Workshops which are advertised on the M4C website. These workshops provide advice on the application process, discussion of examples of previous successful applications and a chance for you to ask questions. We strongly recommend that you participate in a workshop if possible.

**Completing the online Application Form**

To start your application please visit: [https://midlands4cities.smapply.io/](https://midlands4cities.smapply.io/)
We advise that you develop your proposal offline and transfer it to the online form when you are satisfied. You can download a pdf version of part two of the form.

You should aim to make the best case possible for your doctoral application, proof-read before submission to avoid careless spelling or grammatical errors and pay due attention to the word limits where applicable. How you present your project proposal is crucial, so you should use clear and concise language, avoiding jargon.

**Part one of the online Application Form**

Part One of the Application form collects data for two reasons: firstly to enable M4C to process your application, and secondly to allow M4C to measure its success in attracting candidates with a wide range of backgrounds and experience, and to ensure that it provides appropriate support for those candidates. The information in this part of the application form is not part of the assessment process. The Equality and Diversity data is separated from the application before assessment, then it is aggregated and held anonymously. It is not shared with anyone prior to the making of awards. It is reported – aggregated – to M4C’s Management Committee and to M4C’s funders, the Arts and Humanities Research Council.

The questions asked are derived from Advance HE (webpage) and are designed to give the fullest picture possible of applicants and award winners.

**Part two of the online Application Form**

**Project**

**Your Award and Mode of Study**

First of all you need to select the award you are applying for and insert the date on which your doctoral study will begin or, if you have already started, the date on which you began. The types of award are:

- Full-time Open Doctoral Competition
- Part-time Open Doctoral Competition
- Full-time Collaborative Doctoral Award
- Part-time Collaborative Doctoral Award

**Your Proposed Project- CDAs**

If you are applying for a Collaborative Doctoral Award (CDA), please note that while CDA projects have been co-designed in broad terms between an academic and partner organisation, it is important for applicants to address the specific way they intend to engage with the research aims of the project.
**Project Title:**
Please use the advertised CDA project title here.

**Project Proposal:**
For CDA applications you should explain how you will develop your research in the overall context of the advertised project with reference (e.g., Jones, 2017) to existing literature and practice in the field. Make clear the specific question(s), method(s) and critical approaches you intend to apply. Outline an indicative structure/time-line for your project and how you envisage the collaboration with the partner organization. Please outline how your individual approach to the project will contribute to knowledge in the field and have potential for social and cultural impact. Use no more than 500 words.

**Your Proposed Project- Open Competition**

**Project Title:**
If you are applying to the Open Competition with your own project, please give your research project a title. This should be a short title that describes the research to be undertaken and should be a single sentence. Try to avoid writing a question as a working title. It might be helpful to think of this as how you would describe your research to a friend or family member.

**Project Proposal [max. 500 words]:**
A well-conceived project is the cornerstone of a successful application. M4C is looking for innovative, exciting and original research projects, and we welcome applications for interdisciplinary and practice research as well as distinctive contributions to a discipline.

Bear in mind that some of the assessors may not work precisely in your particular specialism but that all of them will be able to assess whether a project is coherent and clearly explained and can be realised within the timeframe of your studies. As part of your proposal, make clear the particular contribution to knowledge and understanding that you hope to make and explain why the research is important.

In describing your project in no more than 500 words you will expected to encompass a number of things. How you balance the weight and priority given to these different elements in the word count will depend on the nature of your project.

- The **context** of your project (i.e., the research or practice background to the problem/challenge/research gap you will investigate).

Please situate your project in relation to a research context. This means to explain why this research is needed and acknowledge previous work in the field (if any exists). Outline your project as relevant to the stage of your research at the time of applying, and with reference (e.g., Jones, 2017; a full bibliography is not necessary) to existing literature and practice in the field.
• The research question(s) it will answer.

What is the question(s) animating your research’s focus? What questions are motivating you to conduct and complete your research? Why must these questions be answered right now? Think about how your research may be staging an intervention in the research area(s) you are drawing on and what questions are raised by the ‘gaps’ in your field(s). Think, too, about what questions are raised by the intersection of your research and wider society? Browsing the M4C website and looking at the Researcher Profiles listed there will give you an idea of the kinds of questions and motivations animating currently funded projects. You might have a single research question, two or three questions, or an overall challenge with several underpinning objectives.

• The method(s) you will use to investigate your research question(s).

Describe your intended methods and try to be as specific as you can at this stage. We want you to outline how you will undertake the research. For example, what is your object of study and how will you gather data or generate insights about it? Is there a particular approach you will take with your creative practice? Will your research focus on a specific geographical location? Will you be undertaking field work, archival research, qualitative interviews, theorisation or other methods?

• The impact(s) your project could make in terms of an original contribution to knowledge in the field(s), and beyond academia (e.g., in professional and creative practice, industry, etc).

Please state how you see that your research project might have impact, in other words the “so what” of doing the research, why does your research matter? Whilst this will necessarily be a short statement, in preparing it you might find it helpful to think about these questions. What changes will be made within your discipline(s) on account of your original research and practical contributions? How will you work with organisations in and out of academia, education, research centres, conferences? Why are these organisations of particular interest to you? What forms of public engagement and dissemination best fit with your research? What are the practical uses of your project? How and why are these the best uses of your project?

• An indicative structure/time-line for your project across the duration of the award you are applying for.

You should outline the planned progression of the research and/or practice over the 3.5 years (FT) or 7 years (PT) of the project to submission, suggesting the main focus of your activity in specific periods and any milestones, e.g. phases of fieldwork, practice or research visits, partner collaborations, completion of chapter drafts, and engagement with training. We are looking to see that you understand the feasibility of your research and have the potential to project manage your PhD.

AHRC Subject Remit:
Please review the [AHRC subject remit guidelines](https://www.ukri.org/councils/esrc/) and using the Level 1 subject classifications listed, identify the primary research area of your project and, if applicable, a Level 2 secondary research area. This will help assessors to understand the disciplines and practices where you are aiming to contribute and instigate change. For interdisciplinary research projects, the primary and secondary areas can be considered as equivalents rather than hierarchically. Particularly where your project crosses disciplinary boundaries, or where your research might be considered for funding by Economic and Social Research Council (https://www.ukri.org/councils/esrc/), we strongly recommend that you should discuss this with your proposed supervisors.

**Ethics [max 200 words]:**

All research projects must comply with relevant research ethics and integrity guidelines. Every M4C institution has an ethics policy and provides guidance appropriate to each discipline, and you must comply with this. Please review your project proposal against your proposed home institution’s requirements. Everyone is bound by the requirements of academic honesty and integrity; other projects may have more particular ethical implications. It is really important to address ethical issues early in your research and this is a good opportunity to start thinking about them. The most common issue in arts and humanities research is the collection of data, particularly, although not exclusively, about people still alive. If this applies to your project, how will you collect data, how will you ensure that your subjects have given their consent, and how you will you store the data you collect? You might also have issues around intellectual property particularly if your project involves close collaboration with a partner. Depending on your research topic, you might not have any specific ethical concerns, but if you do, in this box you must outline:

- **The specific ethical considerations** of your project: these may be material (e.g. copyright and intellectual property, data storage) or methodological (data collection, engagement of research participants/stakeholders); and
- **How you will address ethical concerns** you have identified (e.g., informed consent, anonymisation, appropriate training, identification of support services etc.)

Please note, however, that you should not simply repeat or cut and paste what you find in your institution’s guidance, but be as specific as possible to your proposal.

**Off-site Practice/ Fieldwork/Study Visits [max 200 words]:**

Most projects will require primary research activities, such as visits to a particular archive or archives, or to museum or gallery collection, or the completion of data collection or a piece of fieldwork, or practice or performance. One of the measures of an excellent project and its management is your ability to think through which activities you will need to complete, when and how you will undertake them, including identifying costs you are likely to incur. If your proposed project will require practice, fieldwork or study visits (beyond the use of your home university’s facilities and routine dissemination and engagement, such as presenting at conferences), then you must complete this section. For each activity, you should provide indicative information on:

- **Where** the activity will take place (will you have to travel, which museums, archives,
libraries, sites will you visit, will you need to hire space?)

• **How** long will the activity last or how long will it take to accomplish the visit will be for (i.e., days, weeks)
• **Why** is the activity necessary to your project (i.e., how will the visit support you to complete your research? e.g., enable data collection, stakeholder engagement, language practice etc).
• **What** costs are likely to be incurred (e.g. travel and accommodation; participant costs; equipment hire)
• **Contingency plans** in the event that visits cannot go ahead due to risk assessment outcomes (e.g., restrictions due to COVID-19).

**Extended Funding:**
A collaborative doctoral award is for 4 years full-time, while an open competition award is normally 3.5 years full-time. While a CDA cannot be extended, an open competition award may be extended by up to a maximum of 6 months full-time or 12 months part-time. Although time for training is already included in the standard award, extended funding may be granted where a candidate makes a clear argument for their need for complex or extended training, skills acquisition, extended research/fieldwork visits, extended practice activities, or extended placement needs. Essential skills acquisition might include specialist software or other technical training, or fluency in another language; extended placement needs might result from challenges with collaboration, access and/or the logistics of setting up the placement; extended practice might arise from a need for extended audience engagement. All such requests must make a case for the need and explain how it is integral to your research.

• Please note: extended funding is only confirmed at the first mid-year review, so this request is indicative only.

**Person and Preparedness**

**Qualifications:**
In this section, you are asked to provide details about your academic qualifications, both your undergraduate degree and, if applicable, your postgraduate degree. The AHRC require a good undergraduate degree award as a minimum; M4C also recognises that professional qualifications and experience may provide the equivalent preparation to a Masters qualification.

Your undergraduate degree is usually a first degree, resulting in a BA. If you are an international applicant, and do not know the equivalent British degree or classification, please check with the admissions office in your home institution, who should be able to provide the necessary equivalence.

Should you hold or be studying for a post-graduate degree, this will normally be at Masters level. You may apply for M4C funding while you are studying for a Masters; if that is your situation, please put ‘pending’ under ‘classification’, and the date when you expect to finish
under completion. If you are in this position, please be aware that completing your postgraduate degree will be a condition of your award.

If you do not hold a Masters’ degree nor are studying for one, but have equivalent professional experience, please provide full details of this experience in the next question.

Describe how you are ready to undertake your proposed doctoral research project based on your previous study and experience? [max. 500 words]:
In this question you should demonstrate your preparedness, what makes you the best person to undertake this research project, and what you will bring to it. This is your opportunity to present yourself and your particular abilities and skills, so take time to think through how what you include is significant to how you will undertake your doctoral study. You should comment on your knowledge and skills, whether you have developed those through previous study in higher education (including specific modules if appropriate), through other courses and training (perhaps in a professional context) or professional experience and creative practice (for instance, employment, residencies, curations, internships, exhibiting, performances). You might mention any specialised training you have completed, both academic and professional, such as languages, information technology and specific software packages used in your project, equality, diversity and inclusion training. You should also note academic and professional achievements, such as awards and prizes, scholarships, publications, exhibitions.

It is also important to remember that while not all those looking at your application will be expert in precisely your area, they will be experienced in assessing your fit for the project you have described. You might also reflect on the skills you think you will need but which you do not yet have: for instance, advanced knowledge of a language, or experience with a particular software package. If this is the case, you might mention it as a training need here, to demonstrate that you understand the demands of your project and how you will address them.

Anything else you would like to bring to the attention of the panel? [max. 150 words]:
In this section if you wish, you may mention any circumstances or other experience that you would like to bring to the attention of the panel, where the circumstances have negatively affected your academic results. There is no requirement to disclose such circumstances if you do not wish to, or you do not think that you have any to disclose. If you do not wish to disclose, please make sure that your referees and the interviewing panel are aware of your wish.

Place

Proposed home Institution:
Your home institution is the one to which you have applied. For both open competition and CDA applicants, your lead academic supervisor will be based at this institution.

Proposed supervisory team:
One of the opportunities M4C offers is the option to have a cross-institutional supervisory team, where you can draw on expertise from two or three institutions to support your
project. This might be particularly valuable where your project is inter- or cross-disciplinary, or where you would benefit from very particular expertise. This is an option not a requirement. However, you might find it useful to discuss this with your prospective lead supervisor and to look across the consortium for other academic staff in your area.

For CDA applicants, your supervisory team is set out in the project brief: it will comprise of a lead academic supervisor from your home institution, a second academic supervisor, and a supervisor from the partner organization. For open competition applicants, your supervisory team should include at least two people: your lead supervisor will also be at your home institution, but your second supervisor(s) may be based at any of the M4C institutions, and you might also have a supervisor from a partner organization, depending on the needs of your project.

Describe how your selected M4C institution(s) provide a suitable environment for both the progress of your project and your academic/professional development [max 300 words]:

It is important that you have actively chosen your institution, because the right fit between institution and project makes a huge difference to the project’s success. In this question, you’re asked to explain the academic reasons why you’ve chosen your home institution. There are three main areas you might want to discuss. Firstly, most importantly, you might want to explain why your lead supervisor is the best person to support you in your project. Secondly, you should look at the other networks available. For instance, does your home institution have a particular research strength in your disciplinary area, which means you would be able to participate in broader research discussions and groups? Or is there methodological expertise and resources, which might underpin specialist training that you know you will need? Or are there particular facilities that you would use? These might include an archive, or performance or practice space. And finally, you might also think about what your institution offers to post-graduate researchers more generally: is there good training provision and support? Will there be opportunities to gain career experience, including teaching?

Please review the M4C webpages: https://www.midlands4cities.ac.uk/ Consider how you might both support and benefit from the Midlands4Cities Doctoral Training Partnership. [max 150 words].

You may wish to comment on how you could engage with:

- M4C development funding beyond your stipend.
- Partner organisations.
- Placement and training opportunities.

Midlands4Cities provides a doctoral training programme, and we encourage and expect our students to engage with our provision and with each other, to make the most of the opportunities available. You can see the kinds of opportunities available on the Midlands4Cities website here https://www.midlands4cities.ac.uk/news-events/ and here https://www.midlands4cities.ac.uk/our-offer/. Many students apply for additional funding in order to undertake research activities, including practice, archive and gallery visits, and
presentation of their research at conferences. Some work in collaboration with other M4C students to organise conferences, specific training, and support networks. Others undertake placements to gain research and work experience in partner organisations: our list of current M4C partners can be found here; https://www.midlands4cities.ac.uk/partners/. Students also organise the annual Research Festival and some will become part of the M4C Student Advisory Forum. How might you get the most out of M4C membership?

References

To support your application to Midlands4Cities it is essential that two references are received by M4C via the online M4C reference form by the deadline of 12 January 2022 (noon UK time). To aid with time zone conversion of the deadline, please see the below link:

World clock converter

Please be aware that although your reference request has been sent, your referees must submit their references via our online form before your funding application can be submitted. Late references will not be accepted, and your application will be ruled as ineligible.

In most cases, your referee is only required to complete the M4C reference forms. These will be used by the Admissions Office at your home university and in support of your M4C funding application. If you are in any doubt, please check with your proposed home institution (www.midlands4cities.ac.uk/contact)

When you have completed this section of the online application form, your referee will be sent an automated request to complete the M4C reference form. It is essential that you provide a current and accurate email address for your referees in your application.

Please ensure:

- Your referees are aware that they have been nominated to complete a reference request and confirm that they have received the automated reference request. (In some instances, the request may have been delivered to the junk or spam folder. It is advisable to add noreply@mail.smapply.net to your safe senders list).

- When using a university email address, please use the referee’s full email address, e.g. Joe.bloggs@institution.ac.uk and not their username.

- Referees should not register with the M4C applicant portal to submit a reference. Please ask them to await the automated reference request.
• Your referees understand that they will be expected to include answers to each of the questions on the form.

**Time frame**

We recommend that you complete the M4C reference request section as early as possible but no later than December. **Please allow enough time for your referees to complete their reference or for changes to be made.**

To resend the reference request or change your referee:

1. Revisit the ‘Request a Reference’ section in the applicant portal.
2. Click the three dots and selecting ‘Resend Request’

---

**Selecting a referee**

The M4C reference form is short and consists of four questions:

1. Are you the current or prospective PhD Supervisor?
2. In what capacity do you know the candidate?
3. How long have you known the candidate?
4. Is the candidate equipped to complete the project?
Your referee will be asked to give a Likert rating for question 4 and provide an explanation for the rating.

Completing the reference form should not be an onerous process, but it is essential that you select referees who have the detailed knowledge required to appraise your recent intellectual, creative and/or professional development as well as your preparedness for the PhD project.

**Top tips**

- Discuss your project with your potential referee.
- Establish timeframes - are they able to provide the reference to enable you to submit your application by the deadline?
- Share the reference questions with your referee in advance so they know what is expected of them.
- **Only** ask a potential supervisor to be your referee if that person has **already taught you** (ideally at Masters rather than undergraduate levels), knows your academic record, and can comment on the proposed PhD research.
- If a potential supervisor has **not** taught you before and can only comment on the PhD research proposal that you have shared with them, they should not be a referee.
- If you are already undertaking a PhD (whether full- or part-time) and are applying for funding for the remaining period (21 months minimum of full-time funding or the part-time equivalent), you should ensure that at least **one of your referees is a current supervisor of your PhD** and can therefore comment on the quality and the quantity of the work you have completed to date.
- Applicants who have not been in education for a period of time may choose to select a referee who is, for example, an employer, or a collaborateur, in the creative industries. In this case, you should ensure that referees are aware that they will need to comment on you as a person and professional.
- For further support on choosing and corresponding with your referees, we recommend you speak to your prospective supervisor and/or the Site Director at the institution you are applying to.
- You will be notified automatically when your referees have submitted their references. When you have received both notifications, please go back into your application and mark the reference section as complete. **Until you do this, you will not be able to submit your application.**
- Should you need to change one of your referees because of illness or any other reason, please use the reference page **first to withdraw** the request, (this confirms with your
referee that you have withdrawn them), then **delete the original request**, and then **add a request** to your new referee. You have to delete the original request in order to be able to add another.

**What happens next**

Once all the tasks in your application are complete, including the references, **you must submit your application**: it won’t be submitted automatically. Once you have submitted your application, it is then sent to your home institution and department for shortlisting.

CDA applications are reviewed by the academic supervisor, the site directors at both city institutions and the partner supervisor, and a shortlist is drawn up. Shortlisted applicants will be interviewed by a panel of the academic supervisor, the partner supervisor and one site director from each M4C university in the city. After the interview applicants are scored according to the AHRC criteria linked here, and these scores, and the recommendation for award, are reported to the Student Award Panel.

Open competition applications are reviewed by an academic panel, who will shortlist candidates in their academic unit, using the 4 Ps (person, project, preparedness and place). Part of the shortlisting process is an interview, with a panel normally comprising the unit’s head of graduate studies (or equivalent), the supervisor and one further academic not involved in the project, but in the same or a related discipline. The applications of shortlisted applicants will be returned to M4C with two additional forms: one, a report on the interview, to ensure consistent practice across all interviews, and the second, an institutional support form, on which the unit will confirm its support for the application, both person and project, and confirm the supervisory team. Only applications which are scored at the the very top of the scale (so 5 and 6) will be shortlisted.

The final application – applicant form, references, interview report form, and institutional support form – will be allocated to the appropriate subject-specialist panel for scoring. There are four specialist panels: A1 (History, cultural and museum studies), A2 (Philosophy, Law, Theology, Archaeology), B (Music, Dance, Drama, Fine Art, and Design) and C (Languages and Literatures); the ISF will indicate the most appropriate panel for each shortlisted application. The panel comprise two disciplinary experts from each institution together with one site director from each institution: so a total of 24 people. Panellists score according to the AHRC criteria, as applied to the 4 Ps (person, project, preparedness and place) and return their score to M4C.

Once the scores have been returned, each panel meets to confirm their scores. Each shortlisted application is considered in turn, panellists are given an opportunity to comment on its strengths and weaknesses, and also given an opportunity to change their scores if they wish. After the panels have been completed, the scores are aggregated and the highest scoring applications are identified. These applications are recommended to the Student Award Panel which normally meets in late March or early April.
The Student Award Panel comprises the M4C Director, the Site Directors from each institution, and the M4C’s External Assessor. At this point awards are made, arising from the panel scoring in both Open and CDA competitions, and a reserve list is drawn up. Award letters will be sent as soon as possible after this meeting.
